LEDS + INPUTS

LEDS + INPUTS

Open up the Analog Read Serial sketch.

(FILE > EXAMPLES > BASICS > Analog Read Serial)

LEDS + INPUTS

```
void setup() {
  // initialize serial communication at 9600 bits per second:
  Serial.begin(9600);
}

// the loop routine runs over and over again forever:
void loop() {
  // read the input on analog pin 0:
  int sensorValue = analogRead(A0);
  // print out the value you read:
  Serial.println(sensorValue);
  delay(1);        // delay in between reads for stability
}
```

LEDS + INPUTS

```
void setup() {
  // initialize serial communication at 9600 bits per second:
  Serial.begin(9600);
}

// the loop routine runs over and over again forever:
void loop() {
  // read the input on analog pin 0:
  int sensorValue = analogRead(A0);
  // print out the value you read:
  Serial.println(sensorValue);
  delay(1);        // delay in between reads for stability
}
```

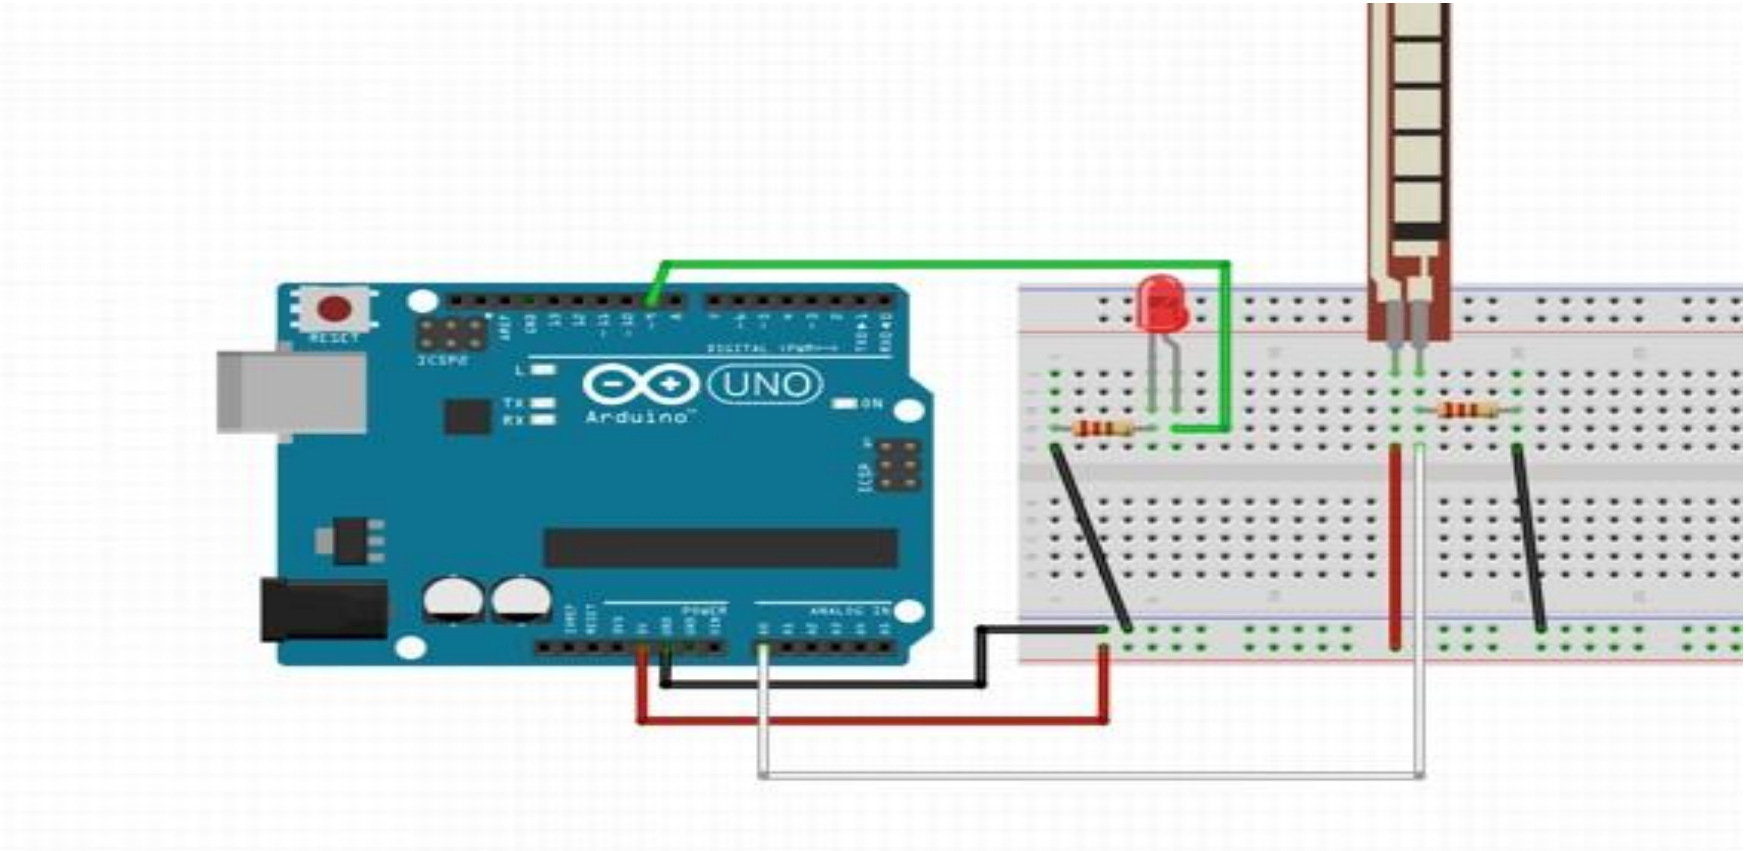
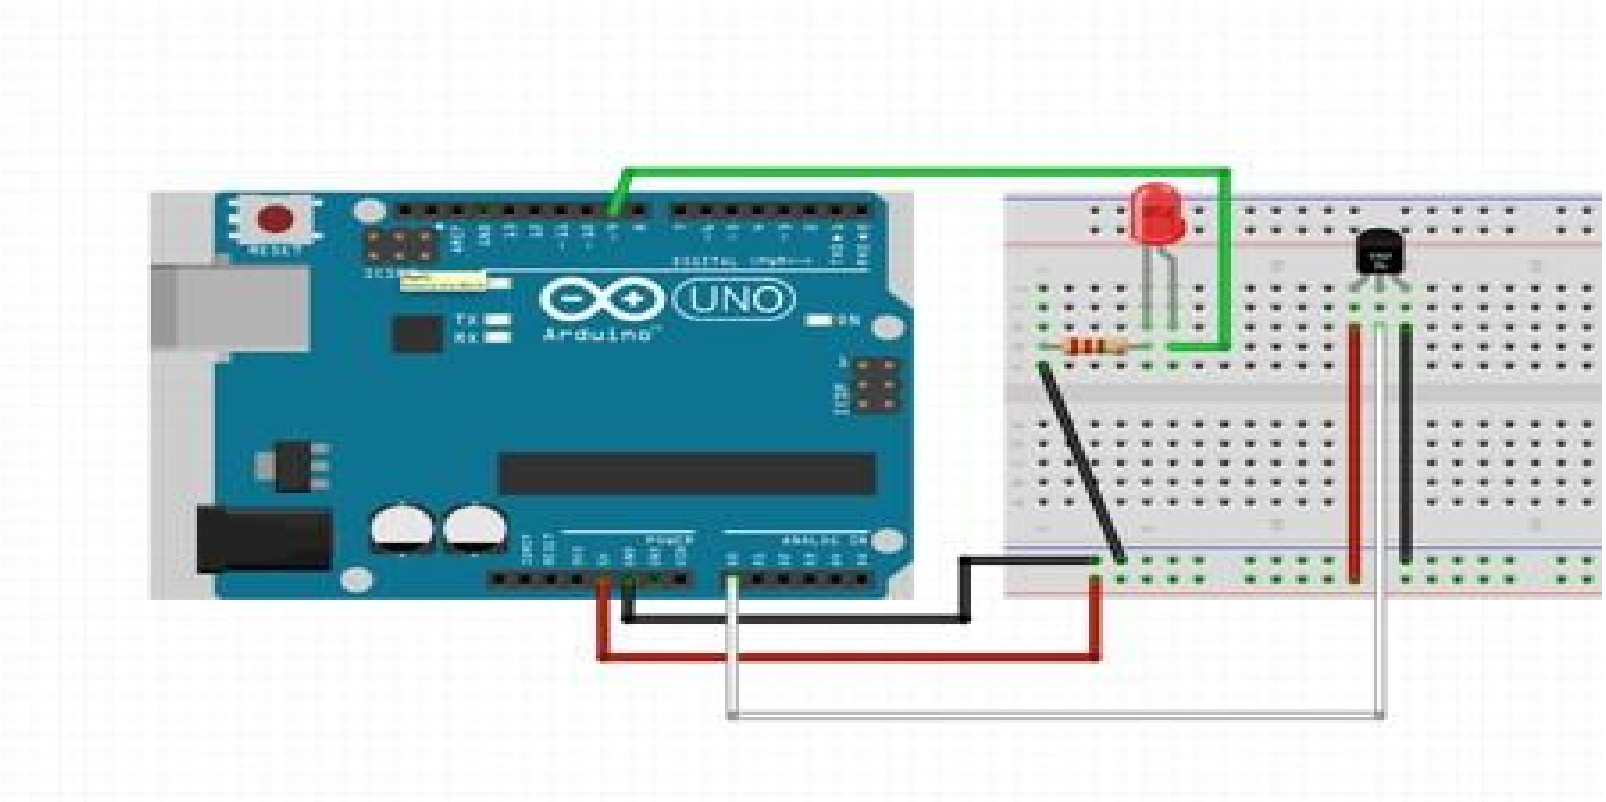
  brightness = map(sensorValue, sensorLow, sensorHigh, 0, 255);
  //set your pin brightness to
  analogWrite(ledPin, brightness);
  delay(300);          // delay in between reads for stability
}
```

LEDS + FLEX SENSOR



LEDS + TEMPERATURE SENSOR



SOLDERING

Here’s your

Homework

Homework

Get the class code up and running. Then, try it with a sensor we didn't cover in class. Take a five second video. Push code to git. Make a blog post of a project idea for this sensor with video and git link. Send me the blog post link.

Homework

Take the project we did in class today and solder it.

NOTE: You can use any analog sensor you want.

Connecting an LED

Bring it to class.

(I want to see a demo!)
